

# **Exploring Victoria Through GIS**

**G**eographic Information System (GIS) combines layers of information about Victoria to give you a better understanding of the city. The layers of information you combine depends on your purpose - finding the best location for a new store, analyzing environmental damage, viewing similar crimes in a city to detect a pattern, and so on.

## ***How can GIS help you?***

GIS helps you in making better decisions and as a tool to query, analyze, and map data. Information can be presented in a form of a map accompanying a report that allows decision makers to focus on the real issues rather than trying to understand the data. GIS provides sound professional advice and technical expertise to assist and guide elected and appointed officials, city management, the development community and citizens.

### ***Provides information***

- Police Patrol Zones
- Fire Districts
- Political Boundaries
- Census Tracts and Blocks
- Traffic Counts
- Transportation Corridors
- Utility Services
- Parcel Boundaries
- Aerial Photography
- Address Verification

***We are in the business of solving problems  
today, while planning for tomorrow.***
