Bias Profiling Report Terminology Key

| | |
|---------------------------------------|---|
| Beat / Zone | These are the geographic patrol zones in the City and correspond with the map on the last page. |
| Category of Moving Violation – Other: | “Other” denotes any other moving violation not listed such as Ran Red Light or Stop Sign, Wrong Way on a One Way Street, etc. |
| DWI/DUI | Driving While Intoxicated / Driving Under the Influence |
| FI Card | Field Interrogation Cards are used when an officer stops a person under suspicious or unusual circumstances. |
| Location of Stop | This is where the vehicle was actually stopped. "Other" would refer to the vehicle being stopped in a parking lot. |
| MVI/License Plates | MVI = Motor Vehicle Inspection |
| Platoon | There are four Patrol Platoons to which Patrol Officers are assigned. |
| SA | Special Assignment – Occasionally officers will be assigned to a special assignment rather than their normal work schedule. In 2008 this designation was used to show officers that worked Operation Border Star. |
| Special Code | Special Codes were used in prior years to denote another special assignment or unit, etc. These haven't been officially established for the last few years. |
| STEP | Selective Traffic Enforcement Program – This was not used in 2008 since our department did not have a STEP Grant from TXDOT for extra DWI, Seat Belt and Speeding enforcement. |
| TS | Traffic Safety Unit – This is the VPD Unit that primarily investigates traffic accidents and conducts traffic enforcement. This item was added to the Scantron collection forms in 2008. |
| Unit | These are units where officers are assigned other than Patrol: Inv – Investigations; SCU – Special Crimes Unit; ADM – Administration (Primarily Traffic Safety); CS – Community Services |
| Verbal | This is under the Citation heading and is a Verbal Warning. |

Victoria Police Department Racial Profiling Report

2008 Analysis Report

1-23-2009

The year 2008 represents the seventh year of reporting the results of racial data required by state law. The Victoria Police Department had a decrease of 3756 contacts over those gathered in 2007. The department continues to gather information at the higher tier II level utilizing the Scantron Data Collection form.

Officers of the department made 15,216 contacts in 2008 which represent police contact as a result of traffic stops or an investigative detention initiated by the officer. All of the marked patrol cars assigned to Patrol and Traffic Safety are equipped with video cameras that are able to record officer contact with drivers. Some of the marked vehicles assigned to Community Services and School Resource Officers are not equipped with camera systems. Although the department does use some unmarked cars only one of those has a camera system (Patrol Lieutenant's car). The other unmarked cars of the fleet are rarely used for traffic enforcement.

In analysis the data indicates the police had contact with a variety of ethnic groups in our City. The most common method of contact made with the driving public is as a result of a traffic violation. This contact represents the majority of police initiated contact with nearly 96.5 percent. The remaining percentage is spread among violations of the penal code, city ordinances, investigative stops, calls for service with vehicle descriptions, and existing knowledge by officers.

Our data indicates that no single group had disproportionate enforcement. The violator most often contacted is male (60.57 %). The majority of the contacts were for a moving traffic violation, with over 70% of all persons contacted being issued a warning. The majority of the contacts (96.39 %) show that officers were not aware of the violator's ethnicity prior to the contact. The majority of the violations were observed on city streets.

Officers searched 7.64 % of the contacts finding some type of contraband in 17.01 % of those searches. The most common item of contraband found were drugs or drug paraphernalia followed by alcohol. The officers authority to search was most often incident to an arrest or by consent of the person. Contact was uniform across the city with the highest contact area being Zone 200 (23.17 %) and the lowest being Zone 100 (10.55 %).

The Police Department had no complaints in 2008 alleging racial bias during traffic contacts.

In conclusion the data indicates that the police department's traffic enforcement efforts are directed at those drivers that commit a violation of law rather than their ethnicity. The best indicator of this is the fact that the majority of the contacts (96.39 %) are made with the officer not knowing the ethnicity of the driver.
